## OUTLOOK:

**Fire Weather Watch:** For southwest and south-central North Dakota due to moderate winds, hot temperatures and a risk of isolated dry lightning.

**Weather Discussion:** A warming trend is on tap for much of the West as high pressure begins to build over the region. A drier westerly flow aloft over California and Nevada will shift thunderstorm pattern of the last few days further to the east. In Alaska, a low pressure trough will cover the northern interior with most of the moisture over the central and southern interior.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
<b>Western Great Basin Area</b> Mostly sunny skies across most of western Nevada though an isolated thunderstorm late in the day cannot be ruled out near the southern Sierra Front. Isolated to scattered thunderstorms across the eastern half of the state with the highest concentration of storms along the Utah border.	Northern valleys: 78 to 98. Southern valleys: 90 to 111. Northern mountains: 72 to 85. Southern mountains: 79 to 84.	Northern valleys: 7 to 24%. Southern valleys: 10 to 20%. Northern mountains: 13 to 30%. Southern mountains: 15 to 25%. <b>Northern Rockies</b> Weak high pressure will produce cooler and generally dry conditions west of the divide. Only an isolated thunderstorm risk over southwest Montana into Wyoming. The rest of the area will experience hot, breezy and generally dry conditions. Parts of eastern North Dakota could experience late afternoon thunderstorms.	West of divide: 78 to 84. East of divide: 86 to 94. North Dakota: 90 to 94.	West of divide: 25 to 35%. East of divide: 20 to 25%. North Dakota: 25 to 40%.	West of divide: west 10 to 15 mph. East of divide: west 10 to 20 mph.
